1.0 INTRODUCTION

The purpose of this Map, Plan and Report is to present data and information to the Town of Stillwater (Town) relative to the proposed inter-connection of Town water systems with the Saratoga County Water Authority (SCWA) water system. The SCWA connection would provide water to the planned Stillwater Business Area/District (Business Area/District) with additional infrastructure connecting to three (3) of the Town's existing water districts.

In 2007, the City of Mechanicville, Town of Stillwater and Village of Stillwater were awarded a New York State Department of State Shared Municipal Services Grant to evaluate opportunities to consolidate or improve individual water supply, storage and distribution systems. A report entitled *Regional Water System Evaluation*, dated December 2010, by The Chazen Companies and Barton and Loguidice, presented nine (9) water supply alternatives to the communities. The recommended alternative identified in the report was a joint Town/City connection to the SCWA. Currently, the SCWA Connection project is progressing as a Town only project, as identified in this report. Provisions for an emergency interconnection with the City's water system have been included with the potential to convert it to a full service interconnection in the future.

All Town of Stillwater water districts are currently supplied with water purchased from neighboring communities, the Village of Stillwater and the City of Mechanicville. Recent and anticipated future capital projects advanced by the City and Village and the need to provide economical water supply to the Town's water customers have prompted the Town to investigate alternate and additional water supplies.

The SCWA has constructed water treatment and distribution facilities extending from the Town of Moreau to the Luther Forest Technology Campus located in the Towns of Stillwater and Malta. The SCWA intends to supply communities along the water main route and would have capacity to service the Town of Stillwater water districts. The Town plans installed water infrastructure to support the water demands of the planned Business Area/District. In addition, the Town will extend water mains from its existing Water District No. 3 and Water District No. 4 to connect to the SCWA water system in the western portion of the Town. The Town also intends to consolidate the existing Water District Nos. 1, 3, 4, and 4 Ext. No. 1) which will be serviced by the SCWA to a single new Water District No. 6. A site location map showing the project area is included in Appendix A.

This Map, Plan and Report includes:

- Description of existing Town water districts;
- Description and mapping of the consolidated water district;
- Estimate of the existing and projected water demands;
- Description of the water system infrastructure, water storage tank and points of connection along with the conceptual system design;
- Opinion of probable construction cost;

- Suggested benefit unit assignment, and;
- Evaluation of the resulting debt retirement and operation and maintenance cost.

Criteria outlined in the *Great Lakes Upper Mississippi River Board of State Public Health and Environmental Managers (10 States Standards)*, *Recommended Standards for Water Works*, 2012 edition and ISO "Guide for Determination of Needed Fire Flow", 2008 edition have been considered in the development of this report. Also included is data obtained from the documents identified below:

- *Town of Stillwater DGEIS Water Supply Evaluation*, dated September 2007, prepared by The Chazen Companies;
- *Feasibility Study for the Stillwater Business Park*, dated January, 2010, prepared by The Chazen Companies;
- *City of Mechanicville, Town of Stillwater, and Village of Stillwater Regional Water System Evaluation*, dated December 2010, prepared by Barton & Loguidice, P.C. and The Chazen Companies, and;
- *Town of Stillwater 2011 Annual Water Quality Report*, prepared by The Chazen Companies.

2.0 EXISTING CONDITIONS

2.1 Town of Stillwater Geography and Demographics

The Town of Stillwater is located in eastern Saratoga County, New York, southeast of the City of Saratoga Springs.

According to the 2010 U.S. Census, the Town of Stillwater population is 8,287 and has a median household income of \$71,909.

2.2 Town of Stillwater Water Districts and Outside District Users

The Town has four (4) existing water districts known as Water District No. 1, 3, 4 and 5, three (3) of which are being considered for service by the SCWA system connection. Water demand information is presented based on the 2012 water usage data. A map showing the existing water districts is attached in Appendix B.

Water District No. 1

Water District No. 1 is located along NYS Route 4, between the Village of Stillwater and the City of Mechanicville. The district primarily purchases water from the Village of Stillwater, but also has a redundant/emergency-use interconnection to the City of Mechanicville. Water District No. 1 serves customers through approximately 520 service connections with an average daily flow of approximately 72,673-gpd in 2012. The current cost of water to Water District No. 1 customers is \$7.70 per thousand gallons, comprised of \$2.37 per thousand gallons for the Town operation and maintenance and \$5.33 per thousand gallons for the Village of Stillwater cost of water. Discussion with the Town indicates the cost of water from the Village is increasing to \$6.00 per 1,000-gallons in 2013. There is no outstanding debt for Water District No. 1.

Water District No. 3

Water District No. 3 is located in the southern portion of the Town generally along Viall Avenue (County Route 75) in an area referred to as Turning Point. The district purchases water from the City of Mechanicville. Water District No. 3 serves customers through approximately 150 service connections. The water usage to Water District No. 3 is measured in combination with Water District No. 4 and is further described in the following paragraph. The current cost of water to Water District No. 3 customers is \$7.25 per thousand gallons, comprised of \$1.64 per thousand gallons for the Town operation and maintenance and \$5.61 per thousand gallons for the City of Mechanicville cost of water. Discussion with the Town indicates the cost of water from the Village is increasing to \$6.74 per 1,000-gallons in 2013. Water District No. 3 has approximately \$1,035,600 in outstanding debt (principal and interest). The existing bond is set to mature in 2025.

Water District No. 4

Water District No. 4 is located in the southeastern portion of the Town generally along Brickyard Road, between Water District No. 1 and No. 3. Water District No. 4 purchases water from the City of Mechanicville. Water District No. 4 serves customers through approximately 100 service connections. As previously noted, usage by Water District No. 3 and Water District No. 4 is measured in combination with a daily average of approximately 51,465-gpd in 2012. The current cost of water to Water District No. 4 is \$7.25 per thousand gallons, comprised of \$1.64 per thousand gallons for the Town operation and maintenance and \$5.61 per thousand gallons for the City of Mechanicville cost of water. Discussion with the Town indicates the cost of water from the Village is increasing to \$6.74 per 1,000-gallons in 2013. Water District No. 4 has approximately \$1,171,900 in outstanding debt (principal and interest). The existing bond is set to mature in 2025.

Water District No. 4, Ext. No. 1 is located in the southeastern portion of the Town, north of Water District No. 4 and includes the Revolutionary Heights Planned Development District (RHPDD). The RHPDD has received final approval from the Town and will service approximately 110 units when complete. Users in Water District No. 4, Ext. No. 1 contribute to the outstanding debt retirement for Water District No. 4.

Table 1.0 below summarizes the existing 2013 water rates for the Town Water District Nos. 1, 3, and 4.

Table 1.0 – Existing 2013 Water Rate Summary

Water District	Existing Cost of Water from City/Village Per 1,000-gal	Existing Town O&M Rate Per 1,000-gal	Existing Total Water Rate Per 1,000-gal
Water District No. 1	\$6.00	\$2.95	\$8.95
Water District No. 3 & 4	\$6.74	\$2.95	\$9.69

Water District No. 5

Water District No. 5 is located along Stratton Lane in the eastern portion of the Town and is non-contiguous with the other water districts. Water District No. 5 purchases water from the Village of Stillwater and serves customers through approximately 12 services. There is no outstanding debt for Water District No. 5.

Outside District Users to the Village of Stillwater / City of Mechanicville

The City of Mechanicville serves properties in the southern portion of the Town of Stillwater which are outside users to the City of Mechanicville and are not included in a Town water district. Approximately 28 homes along Route 67 are serviced by the City of Mechanicville.

The Village of Stillwater services the Hillside Colony Mobile Home Park which is located on Lake Road west of the Village of Stillwater. Approximately 188 units are currently within the Hillside Colony Mobile Home Park which is not within a Town water district. There are also approximately four (4) users along Colonial Road which are not within a Town water district which are serviced by the Village of Stillwater.

2.3 Town of Stillwater Water District Supply Sources

Village of Stillwater

The Village of Stillwater presently supplies water to Water District No. 1 and Water District No. 5, as well as several out-of-district users. Historically, the Village of Stillwater treated drinking water from five wells which are located on a well field at the northeast end of Ferry Lane in the Village of Stillwater. The Village water supply was reportedly classified by NYSDOH as Groundwater Under the Direct Influence of Surface Water (GWUDI) and requiring additional treatment facilities to comply with related regulatory requirements.

In addition, the USEPA has commenced a dredging project in the Hudson River to remove PCB contaminated sediment reportedly to have been deposited by General Electric from their manufacturing plants in Hudson Falls and Fort Edward from 1947 to 1977. The dredging project was initiated in 2009 with an estimated 10-year duration.

The dredging project prompted water providers which utilize the Hudson River for raw water supply, including the Towns of Waterford and Halfmoon, to investigate alternate sources due to water quality degradation. The USEPA provided a temporary Granular Activated Carbon filtration system to the Village of Stillwater water treatment process to aid in PCB removal.

The Village completed a project in early 2012 to connect its water distribution system to the SCWA system and no longer treats and supplies water from its wells. With the Village fully transitioned to the SCWA system, it satisfied the requirements associated with NYSDOH's GWUDI classification and concerns over drinking water quality during the Hudson River Dredging Project.

City of Mechanicville

The City of Mechanicville presently supplies water to Water District No. 3, Water District No. 4, and Water District No. 4 Ext. No. 1.

The City of Mechanicville obtains water from two (2) surface water reservoirs which are in the Town of Stillwater. Water from the reservoirs is treated at the City's filtration plant.

The *Regional Water System Evaluation* report identifies that the City of Mechanicville has excess treatment plant capacity, however, water production is limited by the raw water piping and reservoir siltation and sedimentation. The City is currently investigating options to remediate its reservoir and anticipates making a significant investment to continue treating water at its plant.

2.4 Town of Stillwater Residents with Private Well Sources

Numerous residents in the Town of Stillwater are supplied by private well water sources on their property. During the design phase of the Cold Springs Road/Elmore Robinson Road construction project, several property owners along Elmore Robinson Road requested that testing of their well sources be performed before and after the project to ensure their wells were not adversely affected. Pre-construction well testing indicated several instances of poor yielding wells and at least one well which tested positive for total coliform.

Upstate Home Inspection collected a water sample from the existing well at 70 Elmore Robinson Road on July 24, 2009. The sample was received by St. Peter's Bender Laboratory on July 25, 2009 where it tested positive for total coliform. A copy of the testing results has been provided in Appendix C.

The proposed water main would provide a replacement water supply to properties with poor yielding and/or contaminated wells as an out-of-district service described on the following pages.

3.0 WATER SOURCE

3.1 Connection to the SCWA Water System

The SCWA has constructed a regional public water supply system to expand water service within Saratoga County and provide water supply to the Luther Forest Technology Campus. The raw water source to the regional supply is the Hudson River with the intake and water treatment plant located in the Town of Moreau. Approximately 28 miles of transmission mains have been installed in the Towns or Cities of Moreau, Greenfield, Wilton, Saratoga Springs, Milton, Ballston, Malta and Stillwater, terminating at the Luther Forest Technology Campus located in the Towns of Malta and Stillwater.

The design flow of the SCWA water treatment plant is 14 MGD. The SCWA is currently under contract to supply the Town of Wilton Water and Sewer Authority, the Town of Ballston, the Clifton Park Water Authority, the Village of Stillwater, Global Foundries and the Luther Forest Technology Campus Economic Development Corporation. According to the SCWA Annual Drinking Water Quality Report for 2012, the total water produced in 2012 was 1,410.8 MG. The average day flow in 2012 was 3.85 MGD.

This equates to a reserve capacity of approximately 10.135 MGD. The SCWA system has ample capacity to service the existing Town water districts.

The water storage tank servicing the SCWA system is located in the western portion of the Town of Stillwater near the intersection of Cold Springs Road and Elmore Robinson Road. The tank has a volume of 5-million gallons with a reported working water surface elevation range from 480 to 495-feet. The SCWA storage tank is supplied by a variable frequency drive (VFD) pump system. Under typical flow conditions, the pump system maintains the tank's water elevation near the upper end of its range. A high flow (emergency) situation may result in the SCWA tank potentially being drawn down to the lower end of its range.

The present rate to purchase water from the SCWA is \$2.11 per thousand gallons.

Due to the significant distance separating Water District No. 5 and the other town water districts, it is not planned to advance a connection between the SCWA system and Water District No. 5. Users within Water District No. 5 would continue to receive water from the Village of Stillwater. This also applies to the out-of-district service connections receiving water from the Village.

Out-of-district users located along NYS Route 67 will also continue to receive serve from the City of Mechanicville.

4.0 TOWN WATER DISTRICT NO. 6

4.1 Water District No. 6 Description

The Town intends to create a single consolidated water district, identified as Water District No. 6, which includes the existing Water District Nos. 1, 3, 4, and 4 Ext. No. 1. A map showing the boundary of Water District No. 6 is attached in Appendix G.

4.2 Immediate Demand at Project Inception

The table below is a summary of the immediate estimated demand at the project inception for the Town of Stillwater's Water District No. 6 to be serviced by the SCWA based upon current active users:

Table 2.0: Immediate Average Daily Demand

Service Area	Average Daily Flow (gpd)
Water District No. 1	72,673 ⁽¹⁾
Water District Nos. 3 & 4 (Includes No. 4 Ext. 1)	51,465 ⁽¹⁾
Total Average Daily Demand Water District No. 6	124,138

⁽¹⁾ Based upon 2012 water use records.

4.3 Future Projected Demand

The table below is a summary of the future demand for the Town's Water District No. 6. Daily flows were developed by assigning flows to currently vacant parcels.

The future flow to Water District No. 6 was previously estimated in the Town of Stillwater *DGEIS Water Supply Evaluation* prepared by Chazen. The buildout analysis advanced as part of the *Water Supply Evaluation* predicted the future residential and non-residential occupancy of vacant parcels and associated water demand based upon current zoning regulations after considering regulatory and environmental constraints.

Table 3.0: Future Average Daily Demand

Service Area	Average Daily Flow (gpd)
Water District No. 1	156,960
Water District Nos. 3 & 4 (Includes No. 4 Ext. 1)	193,852
Total Future Average Daily Demand Water District No. 6	350,812

The table above identifies future demands for the Town's Water District No. 6 to be serviced by the connection to the SCWA system. It should be noted that the installation of the water mains associated with the SCWA connection has the potential to also provide water to future service areas outside of the Town's established water districts. The demands associated with other potential future service areas have not been included in this report.

As identified above, the connection to the SCWA system would also supply water to the planned Business Area/District. Data presented in the *Feasibility Study for the Stillwater Business Park* indicates that approximately 8,500,000-square feet of total building area is anticipated for the Business Area/District, of which 50% would be manufacturing and 50% would be wholesale. The number of employees is estimated to be approximately 8,683. Based on the approximate square footage of building space, the estimated number of employees, and proposed building use, Chazen has estimated the anticipated water demand for the Business Area/District as shown in the table on the following page.

Table 4.0: Stillwater Business Area/District – Estimated Water Demand ⁽¹⁾

Building Use	Total Building SF	No. of Employees	Estimated Water Demand (gpd)
Wholesale	4,250,000	4,342	425,000 ⁽²⁾
Manufacturing	4,250,000	4,342	65,130 ⁽³⁾
Total			490,130

(1) Data taken from Stillwater Business Area/District Feasibility Study

(2) Calculation based on Design Standards for Wastewater Treatment Systems, 2012 – 0.1 gpd/sf

(3) Calculation based on Design Standards for Wastewater Treatment Systems, 2012 - 15 gpd/employee/shift

The combined future average day demand for Water District No. 6 and the proposed Business Area/District is estimated to be approximately 841,000-gpd.

5.0 WATER SYSTEM DESIGN

5.1 Water Main

The proposed infrastructure includes approximately 3,000-linear feet of 16-inch diameter water main, 20,815-linear feet of 12-inch diameter water main, 10,300-linear feet of 10-inch diameter water main, and associated appurtenances. The 16-inch diameter PVC water mains would begin adjacent to Cordero Boulevard near the SCWA water storage tank continuing east to Cold Spring Road approximately 750-linear feet. Water mains would continue south on Cold Springs approximately 2,250-linear feet to the intersection of Elmore Robinson Road.

At Elmore Robinson Road the water mains would reduce to 12-inch diameter and continue south approximately 4,465-linear feet along Cold Springs Road to Fitch Road. Here the 12-inch water main will terminate for future connection to the Business Area/District. At Elmore Robinson Road the water mains would reduce to 12-inch diameter and continue east approximately 10,275-linear feet to the intersection with George Thompson. At the intersection of Elmore Robinson Road and George Thompson Road the water mains will split.

Approximately 2,375-linear feet of 12-inch diameter water mains would be installed along George Thompson Road south to site of the proposed Town water storage tank, tentatively located on the Arvin Hart Fire District property. Approximately 3,700-linear feet of 12-inch diameter water mains will be installed along McDermott Road. The water main will reduce to 10-inch diameter and continue approximately 5,200-linear feet along Van Ness Road, connecting to the Town’s existing infrastructure in Water District No. 4. Approximately 5,100-linear feet of 10-inch diameter water mains will be installed along County Route 75 and connect to the Town’s existing infrastructure in Water District No. 3. A map identifying the proposed infrastructure to connect to the SCWA system is attached in Appendix D.

The water mains would generally be installed parallel to the roads, between the road surface and road right-of-way. Water mains will typically be installed in trenches. Trenchless methods will be selectively utilized to avoid environmentally sensitive areas. All disturbed surfaces will be restored to original

condition after construction. Easements may be required if utilities cannot be constructed within the road right-of-way.

5.2 Connection to Neighboring Water Systems

After connection to the SCWA, the existing connection with the Village of Stillwater at Water District No. 1 would become an emergency interconnection. The existing Water District No. 3 booster pump station, previously supplying water from the City of Mechanicville, would be decommissioned. Emergency interconnections are also being considered with two (2) local private water suppliers, Saratoga Water Services and the Saratoga Glen Hollow Water Supply Corporation. The Town would potentially provide emergency service to these private water suppliers. Note that the water main connection to the SCWA system has been designed to provide the typical average day flow to either the City or the Village; however emergency supply to both communities simultaneously may not be accommodated.

A summary of the neighboring water system interconnections, their normal operating status, and emergency capabilities is provided in Table 3.0 below.

Table 5.0: Neighboring Water System Interconnects

Connection	Normal Operating Condition	Emergency Operation
Town/Village at W.D. No. 1	Closed	<ul style="list-style-type: none"> ○ Town to Village (partial) ○ Village to Town (partial)
Town/Private Water Suppliers	Closed	<ul style="list-style-type: none"> ○ Town to Private Water Suppliers only
Town/City at George Thompson Rd.	Additional Infrastructure Required (see below)	<ul style="list-style-type: none"> ○ Town to City only
Town/City at W.D. No. 3	Inactive Pump Station at W.D. No. 3 to be Removed	<ul style="list-style-type: none"> ○ Inactive Pump Station at W.D. No. 3 to be Removed

The Town intends to include a bid alternate in the project for the installation of water mains south along George Thompson Road connecting to the City’s existing water system. If the bid alternate is not accepted by the Town once bids are opened, additional infrastructure would be required for the interconnection with the City. It should be noted that the remainder of the water infrastructure to be installed by the Town supports interconnection with the City based on their current system demands. At the time a full service connection is made, the Town anticipates the City to pay a one-time connection fee to the Town, based upon a proportional benefit to the infrastructure costs of the connection to the SCWA system. The exact fee paid by the City would be based on the actual construction costs of the project, once bid and constructed, and related financing costs incurred from the date of completion to the date of service, unless otherwise agreed. The City would then purchase water from the SCWA, at its current rate, in addition to a nominal transmission fee to the Town for infrastructure operation and maintenance. The transmission fee would be agreed to and included in an Intermunicipal Agreement between the Town and the City at the time of service, unless otherwise agreed.

5.3 Water Storage Tank

The connection to the SCWA would require a water storage tank to supply the Town's Water District No. 6 with suitable flow and pressure.

In accordance with 10 States Standards, storage facilities should have sufficient capacity to meet domestic and fire flow demands and:

- a. Fire flow requirements established by the appropriate state Insurance Services Office (ISO) should be satisfied where fire protection is provided and;
- b. The minimum storage capacity for systems not providing fire protection shall be equal to the average daily consumption.

The design criteria for the water tank storage capacity will be the average daily consumption plus the ISO minimum storage requirements for fire flow.

According to the ISO Guidelines, for 1-family and 2-family dwellings not exceeding 2 stories in height, the maximum needed fire flow is 1,500-gpm (considered to be a conservative estimate to determine the required fire flow storage) and shall be maintained for a minimum of 2 hours. The minimum storage required for fire flow is 180,000-gallons.

As identified above, the future average daily demand for Water District Nos. 1, 3, and 4 is approximately 350,800-gpd and is approximately 490,000-gpd for the Business Area/District. Therefore, the combined average daily demand is approximately 840,800-gpd. The total required storage to satisfy the average daily demand plus the minimum storage for fire flow is approximately 1,020,800-gallons. The Town's existing water storage tank in Water District No. 1 is reportedly 250,000-gallons. To meet the additional storage needs, Chazen proposes a new 750,000-gallon elevated storage tank. The tank is anticipated to be located on property owned by the Arvin Hart Fire Department along George Thompson Road.

The tank will be approximately 85-feet in height with a working elevation between 485-feet and 490-feet. This working elevation is slightly lower than the SWCA's water storage tank on Cordero Boulevard which is reportedly 485-feet to 495-feet. Tank operation will be controlled by an altitude valve and will be filled by gravity from the SCWA tank. Boost chlorination will likely be required and will vary depending upon chlorine residuals of the delivered water from SCWA. It is anticipated that the boost chlorine will be injected from a prefabricated, pre-engineered building located adjacent to Cordero Boulevard.

5.4 Pressure Zones

By connecting to the SCWA to supply Water District No. 6, the current City of Mechanicville and Village of Stillwater water supplies would be discontinued as the permanent water sources for the consolidated service area. The connection to the Village of Stillwater water supply will be maintained initially as a back-up for redundancy and emergency supply sources.

The modification of the water source to the existing districts alters the water distribution system hydraulics. The booster pumping station which currently draws water from the City of Mechanicville

water system and provides flow and pressure to Water District Nos. 3 and 4 and the Village water storage tanks supplying pressure and flow to Water District No. 1 would be replaced by the new Town water storage tank.

Pressure reducing valves will be utilized to regulate system pressure, thereby separating the distribution system into several pressure zones.

6.0 OPINION OF PROBABLE COSTS

The following opinion of probable costs is developed anticipating construction by competitive bid and utilizing posted wage rates for construction in accordance with the NYS Municipal Law.

The cost opinions are based upon our understanding of the project and have been developed using 2013 construction budgeting values. Subsequent changes in the project scope or time frame may change project costs. Since there is no control over the costs of labor and materials or competitive bidding and market conditions, the opinion of probable construction costs is made on the basis of past experience and limited available data. These opinions represent our best judgment as a consultant familiar with the public works industry. However, there is no guarantee that proposals, bids or construction costs will not vary from the opinion of probable costs.

Table 6.0: Total Project Cost

Description	Units	Unit Cost	Qty.	Cost
Mobilization	1	LS	\$178,000.00	\$178,000.00
Maintenance and Protection of Traffic	1	LS	\$35,000.00	\$35,000.00
Erosion and Sediment Control	1	LS	\$25,000.00	\$25,000.00
Rock Excavation	100	CY	\$125.00	\$12,500.00
Asphalt Pavement Replacement (top, binder & subbase)	11,800	SF	\$7.00	\$82,600.00
Gravel Driveway Restoration	200	LF	\$20.00	\$4,000.00
Connection to Existing Water Main	4	LS	\$10,000.00	\$40,000.00
10" PVC Water Main	10,300	LF	\$40.00	\$412,000.00
12" PVC Water Main	17,475	LF	\$50.00	\$873,750.00
16" PVC Water Main	3,000	LF	\$60.00	\$180,000.00
Directional Drill Water Mains	3,340	LF	\$175.00	\$584,500.00
10" Gate Valve & Valve Box	20	EA	\$2,000.00	\$40,000.00
12" Gate Valve & Valve Box	48	EA	\$2,500.00	\$120,000.00
Fire Hydrant Assembly	68	EA	\$3,500.00	\$238,000.00
Water Storage Tank (incl. Site Work)	1	LS	\$1,500,000.00	\$1,500,000.00
Chlorination Building/System + Controls (SCWA Tank Site)	1	LS	\$45,000.00	\$45,000.00
Water Meter/Vault (SCWA Tank Site)	1	EA	\$35,000.00	\$35,000.00
Pressure Reducing Valve/Vault	3	EA	\$25,000.00	\$75,000.00
Water Main Flushing, Pressure Testing, Disinfection	34,115	LF	\$1.00	\$34,115.00
Site Restoration	30,775	LF	\$5.00	\$153,875.00
			Subtotal	\$4,668,340.00
			Construction Contingency (15%)	\$931,660.00
			Construction Subtotal	\$5,600,000.00
			Legal, Technical & Administrative Allowance (20%)	\$1,100,000.00
			Easement Acquisition	\$50,000.00
			Total Project Budget	\$6,750,000.00

The outstanding debt balance (principal and interest), at the time of this report, for Water District No. 3 and Water District No. 4 is approximately \$1,035,600 and \$1,171,900, respectively. The retirement of the existing debt for Water District Nos. 3 and 4 will remain the responsibility of users within each individual district. The total amount to be bonded for the project by the Town is \$6,750,000.

7.0 BENEFIT UNIT ASSIGNMENT

7.1 Current Benefit Unit Formula

The benefit assignment to users is based upon the Town's previously accepted benefit unit assignment formula, the land use methodology, which is summarized as follows:

<u>Property Type</u>	<u>Benefit Unit</u>
Single-Family Home (2 acres or less)	1.0
Apartments / Mobile Homes / Multi-Family Residence	1.0 / unit
Vacant Residential Land (2 acres or less)	1.0
Residential Land (in excess of 2 acres)	0.3 / acre
Agriculture (per Zoning code)	1.0 for 1 st 2-acres and 0.05/acre greater
Developed Non-Residential Land	Correlation/Proportional water use of residential to non-residential (min 1.0) ⁽¹⁾
Undeveloped Non-Residential Land	0.7 / acre (min. 1.0)
Vacant Rural Land	0.7 / acre
Conservation Easements (in excess of 2 acres)	0.1 / acre
Municipally Owned Lands/Cemetery/Utility Substation	0.0

⁽¹⁾ All uses within the District are metered. Initial assessment is based upon an Engineer's estimate and will be adjusted annually with actual metered usage.

7.2 Existing Water Districts

The properties within Water District No. 1 are not currently assigned benefit units. Based upon the benefit unit assignment formula described above, the preliminary estimated benefit units within Water District No. 1 is 726.11. As the project advances, the Town of Stillwater Water Committee shall review, update and finalize the preliminary benefit unit estimate. Tabulation by tax parcel and associated benefit unit assignment in Water District No. 1 is attached in Appendix E.

Based on discussions with the Town, Water District No. 3 currently has a benefit unit assignment of 360.16. Water District No. 4 has a current benefit unit assignment of 424.51, including Water District No. 4 Ext. No. 1. Tables listing tax parcels within Water District No. 3, Water District No. 4, and Water District No. 4 Ext. No. 1 are included in Appendix F.

7.3 Water District Consolidation

The Town intends to create a consolidated Water District No. 6 which includes the existing Water District No. 1, Water District No.3, Water District No. 4, and Water District No. 4 Ext. No. 1. Existing debt within individual districts would remain the responsibility of its respective users prior to consolidation. A map showing the boundary of Water District No. 6 is attached in Appendix G.

The benefit unit assignment for the Town’s Water District No. 6 is summarized below.

Table 7.0: Benefit Unit Assignment Summary

Service Area	No. of Parcels ⁽¹⁾	Suggested Benefit Units ⁽¹⁾
Water District No. 1	662	726.11
Water District No. 3	268	360.16
Water District No. 4 + Water District No. 4 Ext. No.1	256	424.51
Town Water District No. 6	1,186	1,510.78

⁽¹⁾ Total No. of Parcels and Number of Benefit Units determined annually by the Town to account for changes in land use, conservation easements, consolidations and realty subdivisions and may vary from prior fiscal year values.

7.3 Future Water Service Connections

The Town intends to allow future connections to the water system by users within the newly established Water District No. 6 or individual outside district users. Outside district users would be reviewed on a case by case basis, but would typically receive a benefit unit assessment of 1.5 times those established in Section 7.1 above. This would apply to new debt over the consolidated water district and any future extensions thereof. The Town presently charges between \$1,800 and \$1,900 for labor and material associated with water meter installation for new users. In addition, the Town charges an additional fee, based on the cost of materials, for water main tapping and the installation of water service piping and a curb stop to the property line. The exact cost associated with individual water service installations will be determined at the time of connection. It is the responsibility of the property owner to make the water service connection from the curb stop to the interior building plumbing. All connections shall be in accordance with NYSDOH and Town of Stillwater requirements and performed by a qualified installer.

8.0 ANNUAL USER COST ANALYSIS

8.1 Construction Bonding Cost and Existing Water District Debt Retirement

The construction of the water main from the SCWA to the Business Area/District, existing Town Water Districts, and the water storage tank will require the issuance of bond anticipation notes to finance the project cost of \$6,750,000.

The Town plans to bond the proposed project for 30-years at an estimated 3.5% interest rate. Assuming that \$6,750,000 will be financed, the resulting annual debt payment (principal and interest) is approximately \$367,006. The Town anticipates making the annual principal and interest payment via A-Fund Town Outside revenues collected for the PILOT funds provided by GlobalFoundries. Annual debt costs would not be conveyed to users within the Water District No. 6, throughout the period of the PILOT.

As identified in the *Feasibility Study for the Stillwater Business Park*, the proposed Business Area/District has significant Town-wide economic benefits. More specifically, this includes the creation of short-term construction employment, fulltime employment, and an increase in tax revenues from new wages and development. The *Feasibility Study* estimated that anywhere from 5,414 to 8,683 fulltime jobs, with annual wages ranging from \$261- to \$419-million could be created following construction of the Business Area/District. Recognizing the need to enhance the Town economy and improve the quality of life, the Town, through a public participatory planning process, amended its Comprehensive Plan to support such economic development along the Route 67 corridor and proposed Business Area/District.

8.2 Operation and Maintenance/Cost of Water

Users within the Water District No. 6 will pay an operation and maintenance charge to the Town of Stillwater of \$2.95 per 1,000-gallons of usage. Based upon the typical single-family home usage of 200-gpd or 73,000-gallons per year, the annual operation and maintenance cost is \$215 for the typical single family home.

Conservatively assuming a water demand of 124,000-gpd (2012 flow for existing Water District Nos. 1, 3, and 4) is seen at the project inception, the Town can expect an estimated annual income of approximately \$133,520 given the operation and maintenance change identified above. Based upon the future estimated demand of 350,800-gpd, including the future potential build out of users within the Town Water Districts, as estimated in Section 5.2, the Town can expect an estimated annual income of approximately \$377,720. Using the total future average daily demand of 841,000-gpd, the Town may realize a potential future annual income of as much as \$905,550. As additional users connect to the water system, the Town may choose to reevaluate and adjust its operation and maintenance rate.

The 2013 water purchase rate from the SCWA system is \$2.11 per thousand gallons. Based upon the typical single-family home usage of 200-gpd or 73,000-gallons per year, the annual cost to purchase water from the SCWA is approximately \$154.

8.3 Annual User Cost Summary

The annual user cost for Water District No. 6 is determined by the existing debt retirement within the water districts, the Town’s operation and maintenance cost and the cost of water from the SCWA. Assuming the typical single-family home uses 200-gpd or 73,000-gallons per year, Table 8.0 on the following page estimates the annual user costs.

Table 8.0: Estimated Annual User Cost – Typical Single Family Home

	W.D. #1 ⁽¹⁾	W.D. #3	W.D. #4	W.D. #4 Ext. 1 ⁽²⁾
Existing Debt per BU (Based on Town's 2012 Budget)	\$0	\$217⁽³⁾	\$213⁽³⁾	\$213
SCWA Cost of Water (\$2.11 per 1,000-gal)	\$154	\$154	\$154	\$0
Town O&M Rate (\$2.95 per 1,000-gal)	\$215	\$215	\$215	\$0
Estimated Annual Usage Payment per Typical Single Family Home	\$369	\$369	\$369	\$0
Total Annual Cost per Typical Single Family Home	\$369	\$587	\$582	\$213
Total Equivalent Cost per 1,000-gal	\$5.06	\$8.04	\$7.98	\$2.92

⁽¹⁾ These calculations assume the contract between Water District No. 1 and the Village of Stillwater has expired. The contract expires in 2016. Users within Water District No. 1 would continue to receive water from the Village until then.

⁽²⁾ Currently no water service connections are present in Water District No. 4 Ext. No.1. Users in Water District No. 4 Ext. No. 1 are responsible for the debt payment only until a service connection is installed, similar to existing vacant properties and other parcels receiving benefit, however, deferring connection and service to a future date.

⁽³⁾ Existing bond currently expires in 2025.

Annual costs associated with out-of-district users would be 1.5 times the rate of in district users. Assuming no new debt, the typical user rate would be approximately \$553.50 (1.5 x \$369).

8.4 Existing Water District Annual User Costs

For comparison, Table 9.0 on the following page is a summary of existing annual user costs for the typical single family home within existing water districts:

Table 9.0: 2013 Existing User Cost – Typical Single Family Home

	W.D. #1	W.D. #3	W.D. #4	W.D. #4 Ext. 1
Existing Debt per BU (Based on Town's 2012 Budget)	\$0	\$217	\$213	\$213
Village of Stillwater Cost of Water (\$6.00 per 1,000-gal)	\$438	\$0	\$0	\$0
City of Mechanicville Cost of Water (\$6.74 per 1,000-gal)	\$0	\$492	\$492	\$0
Town O&M Rate (\$2.95 per 1,000-gal)	\$215	\$215	\$215	\$0
Estimated Annual Usage Payment per Typical Single Family Home	\$653	\$707	\$707	\$0
Total Annual Cost per Typical Single Family Home	\$653	\$925	\$920	\$213
Total Equivalent Cost per 1,000-gal	\$8.95	\$12.67	\$12.61	\$2.92

Based on the above comparison of existing annual costs versus the estimated annual cost following the connection to the SCWA system, customers in Water Districts No. 1 would see a reduction in annual costs from approximately \$653 to \$369, customers in Water District No. 3 would see a reduction in annual costs from approximately \$925 to \$587, and customers in Water District No. 4 would see a reduction in annual costs from approximately \$920 to \$582. As there are presently no installed services, property owners in Water District No. 4 Ext. No. 1 would initially pay for the debt retirement portion only of \$213 which would increase to approximately \$582 following the installation of a water service connection, and until such time as the existing debt is retired.

9.0 REQUIRED APPROVALS AND OTHER ACTIONS

The following approvals are required for the construction of the SCWA water system connection and Water District No. 6:

- Submission of this Map, Plan and Report to the Town Board, followed by a Public Hearing, receipt of revised Map, Plan and Report based upon public hearing comments.
- Final review and acceptance of Map, Plan and Report.
- Complete SEQR Review and Determination.
- Agreement(s) with SCWA for water purchase.
- Modify existing agreements with the City and Village, develop Memorandum of Understanding for emergency connections.
- Bonding for required Project Costs.

- Property acquisition and mapping, including Easements or Fee Title for private lands necessary for construction of proposed infrastructure.
- Finalize field studies required for SHPO, wetland and ecological permitting.
- Construction drawings and specifications for construction prepared by the Engineer.
- Submission of permit applications for Water Supply Application, SHPO, wetlands and ecology.
- Approval of a Highway Work Permit for Work on Town Roads – Town of Stillwater Highway Department.
- Approval of a Highway Work Permit for Work on County Roads – Saratoga County Department of Public Works.
- Approval of engineering plans and specifications by the New York State Department of Health.

10.0 CONCLUSION

Chazen has completed an investigation and analysis for the consolidation of Town water districts and then connection of to the SCWA water system.

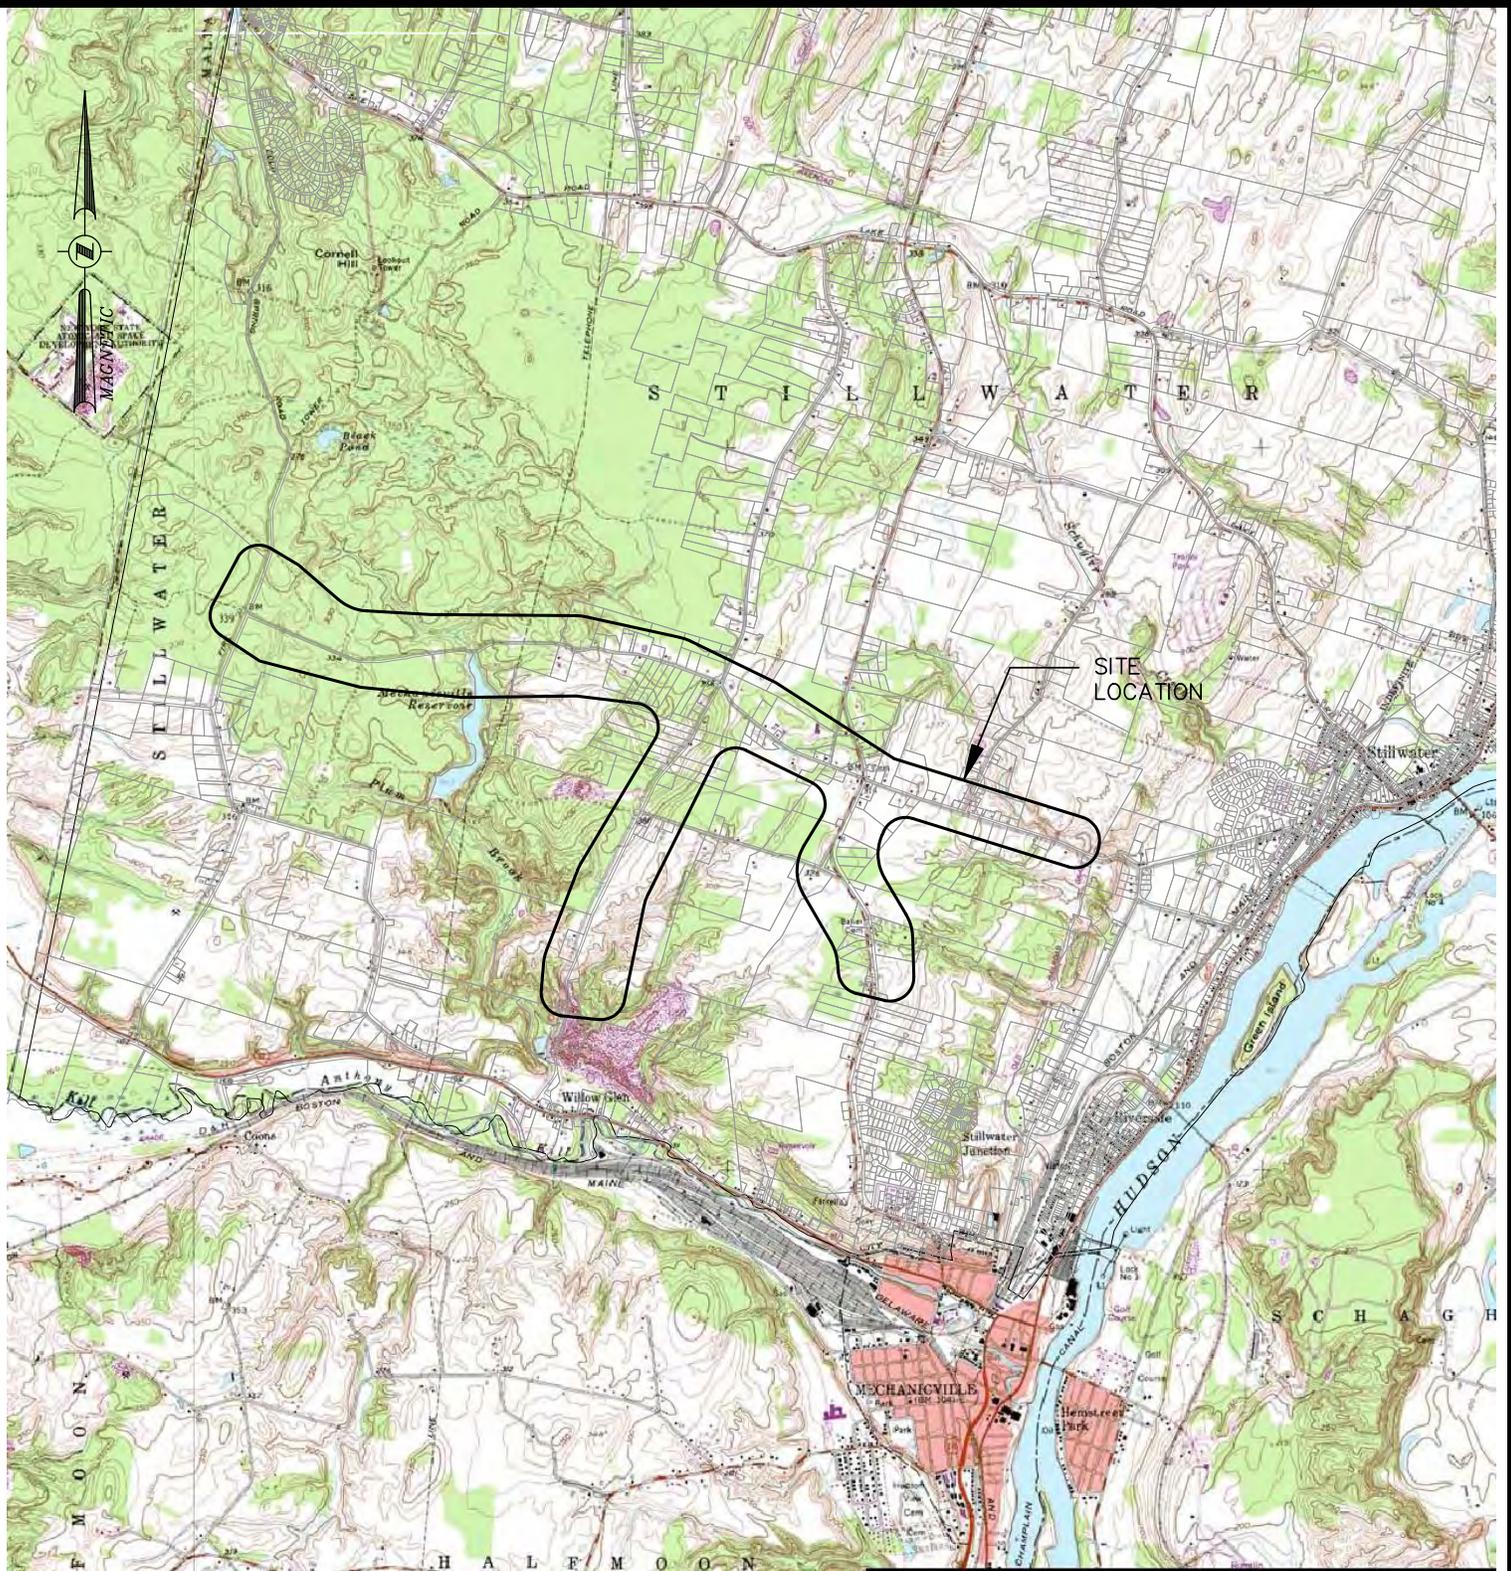

The Town of Stillwater water districts are currently supplied with water purchased from the Village of Stillwater and the City of Mechanicville. Recent and anticipated future capital projects advanced by the City and Village and the need to provide economical water supply to the Town's water customers have prompted the Town to investigate alternate and additional water supplies.

The SCWA has constructed water treatment and distribution facilities extending from the Town of Moreau to the Luther Forest Technology Campus located in the Towns of Stillwater and Malta. The SCWA intends to supply communities along the water main route and would have capacity to service the Town of Stillwater water districts. The 2013 water purchase rate from SCWA is currently \$2.11 per thousand gallons.

To connect to the SCWA water system, the Town of Stillwater would extend water mains from the existing water districts to the SCWA water system in the western portion of the Town. The initial average daily demand to the town water districts is approximately 124,138-gpd with an estimated potential future demand of 350,812-gpd. The estimated demand of the Business Area/District is 490,130-gpd.

The opinion of probable cost for the entire project cost is approximately \$6,750,000 including approximately 34,000-linear feet of water main piping, an elevated water storage tank, boost chlorination system, fire hydrants, valves and other required appurtenances. The Town intends to consolidate the existing Water District No. 1, Water District No. 3, Water District No. 4, and Water District No.4 Ext. No.1, all to be supplied by the SCWA system, into a single new Water District No. 6. Debt in existing districts would be remain the responsibility of users within their existing water district.

--------------------------------	----------	------------	---	---------------	-----	------------

Comments:

Sample is POSITIVE for Total Coliform. This result indicates that the water WAS-NOT of a SATISFACTORY sanitary quality when sampled for the contaminants examined. Water of good sanitary quality should have no Escherichia coli or Total Coliform Bacteria. Sample is NEGATIVE for Escherichia coli. EC MUG TUBE NEGATIVE.

6 Total Coliform Colonies.

Sample was NEGATIVE when screened for total residual chlorine. Bacteriological sample was set up on 7/25/09 at 14:00.

Test procedures for all analyses meet NELAC requirements.

Note 1: Per ELAP requirements, water analyzed for alkalinity, color, conductivity, nitrate, nitrite, sulfate, organics, UV absorbance, non-potable bacteriological analyses, BOD/CBOD, solids and phosphorus (total & ortho), should be received on ice in the chilling process. ELAP requirements specify that temperatures ranges are 2-6 degrees Celsius for potable and 2-8 degrees Celsius for non-potable samples.

Thank you for choosing Upstate Home Inspection Service. Experience and Integrity at work for your peace of mind.

This inspection was performed by NACHI Certified Home Inspector Dan Osborn and was conducted under the highest standards in our profession and in compliance with the Standards of Practice set forth by The National Association of Certified Home Inspectors.

This report identifies the defects that the inspector observed that were deemed material to the Home Inspection. Also this report may offer comments as a courtesy to the client regarding some of the maintenance needs of the home and of some average life expectancies of certain components.

Please pay attention to important information and warnings contained in this report. They can help prevent failure of equipment or damage to the home, and may contain safety concerns regarding this home and property. Thank you.

If you have any questions regarding this report please call Dan Osborn at (518)877-0242.

PSI at Start: 20 PSI
PSI at Stop: 20 PSI
Gallons per minute at Stop: Well went dry

07/24/2009

A well flow test was performed. The well produced 3 gallons of water for 30 minutes. After 30 minutes the point well went dry.

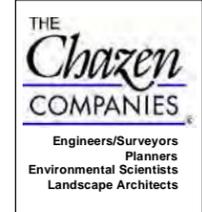

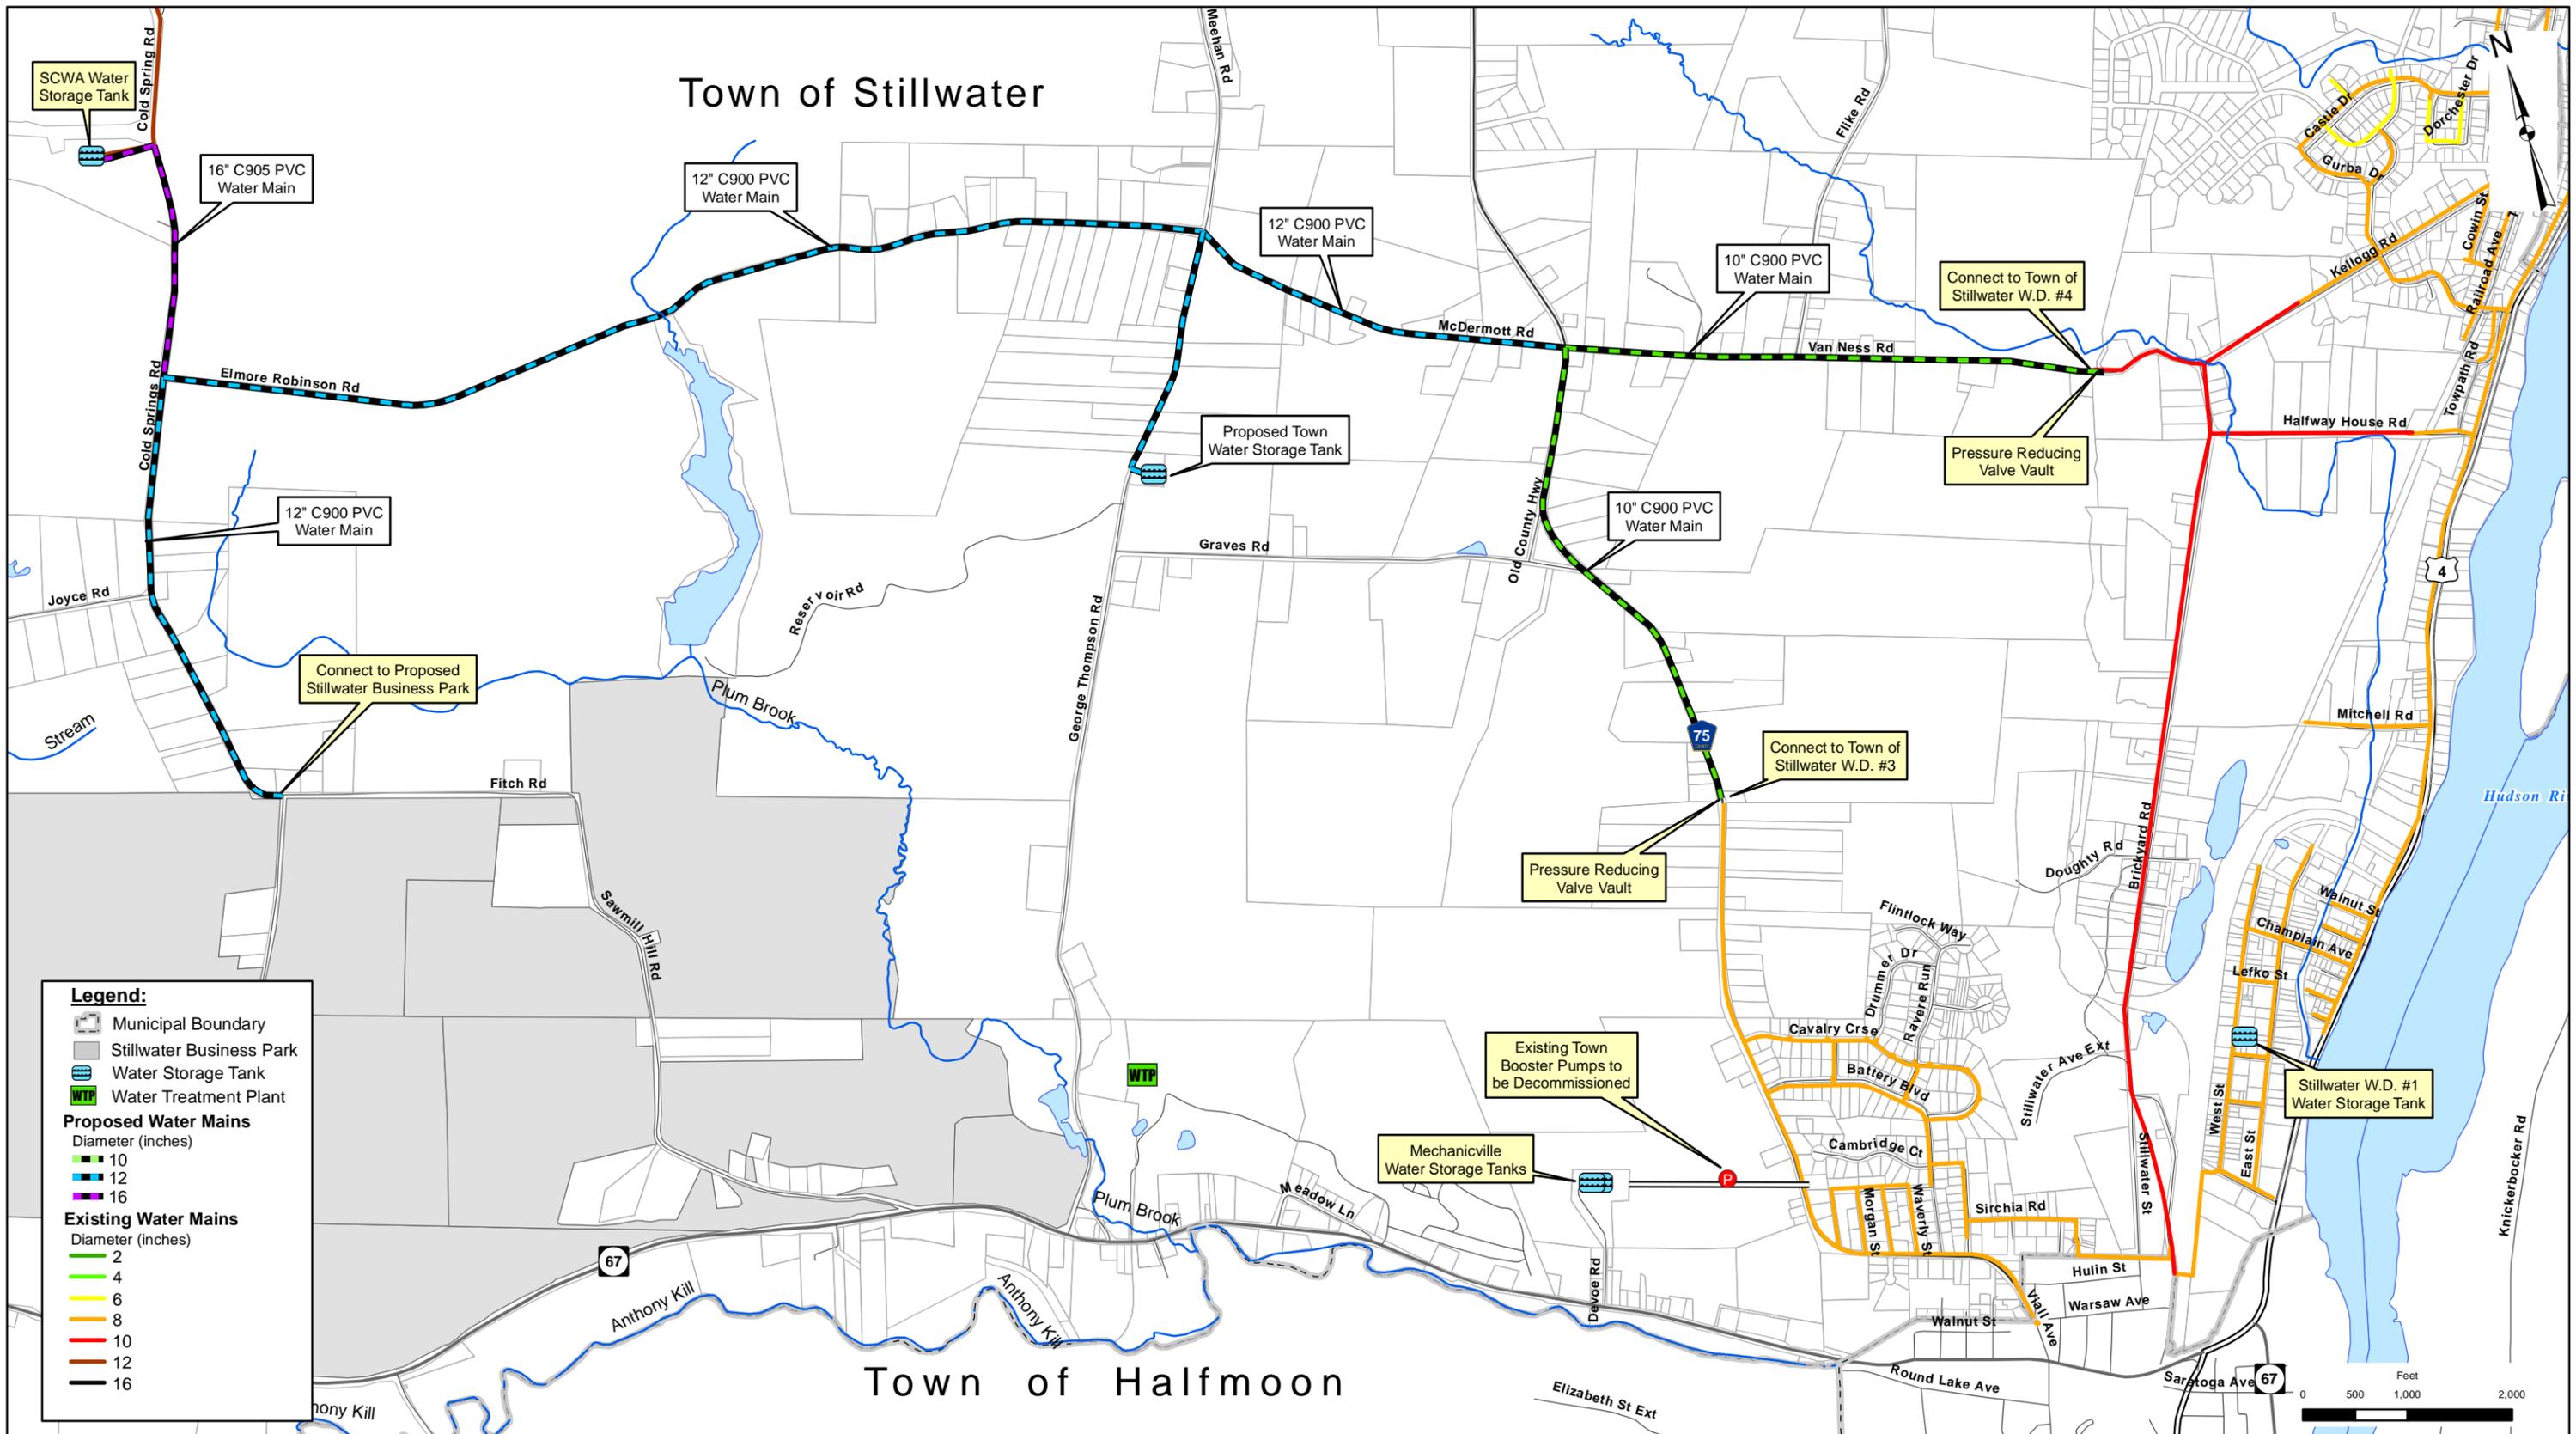

The home inspection was limited to readily accessible areas of the building and was limited to visual observations only. Your inspector cannot report on obscured or concealed defects. He did not move furniture, lift carpeting, or dismantle any items or equipment.

An earnest effort was made to discover all of the visible defects. All of the major deficiencies observed are reported. Minor deficiencies are also included but we did not attempt to list them all. This report is based on opinions of the inspector only and is not a guarantee or warranty.

This home inspection is in accordance with the current Standards of Practice of the National Association of Certified Home Inspectors posted at <http://www.nachi.org/sop.htm>
